## IS5 - Heavy Duty Wire Insulation Stripper

**“Fast and easy  
removal of insulation with  
IS5 Heavy Duty Wire Strippers”**

for wires from 0.1 mm to 7 mm Ø

|                              |                    |
|------------------------------|--------------------|
| Power:                       | 300W / 230V        |
| Speed:                       | 3500-15000/min     |
| Heavy duty use:              | 100% under tension |
| Weight incl. stripper head:  | 1150g              |
| Length incl. protection-cap: | 280mm              |
| Diameter:                    | 58-64mm            |

IS5 Insulation Strippers guarantee a fast and precise removal of insulation of all electrical wires and insulated lead cables from 0.2 to 7 mm diameter.

The various available stripping heads are easily exchangeable and ensure perfectly clean wire ends. The three carbide blades within the cutting heads are aligned to the respective optimal cutting angle for the different wire diameter ranges. Due to centrifugal forces the blades close around the wire. The precise adjustment required for any particular wire diameter is carried out by means of a stop screw, which also prevents damaging the conductor. An adjustable stop pin permits the presetting of any desired stripping length.

Stripper heads for other types of insulation are also available on request.

In cases where precise and safe guiding of the wire is required, the use of a protective cap with wire guide is recommended. This cap is provided with slots through which insulation waste is expelled. The bore in the wire guide can be drilled to the respective wire diameter to ensure an optimal guidance of the wire.
